

IBRAHIM MOHAMED SHOEIB

BACKEND-FOCUSED FULL-STACK DEVELOPER

New Damietta, Egypt | ibrahimshoeib255@gmail.com | +20 1024994092

Profile

Full-Stack Developer (Backend-Focused) with 2+ years of experience building scalable SaaS and ERP systems. Strong expertise in backend development using NestJS, Node.js, and Express, along with advanced frontend development using React and modern state management libraries. Experienced in building production-ready applications, designing APIs, and managing complex application state and validation.

EDUCATION

Bachelor of Computer Science at Damietta University, Damietta, Egypt

October 2018 - Present

Grade: Good

Studied core computer science fundamentals including data structures, algorithms, databases, and software engineering. Built multiple academic and practical projects focused on backend development and web applications.

EXPERIENCE

Freelance Backend / Full-Stack Developer at Self-Employed, Remote / Egypt

July 2022 - Present

- Built scalable SaaS and ERP systems for real-world business use
- Designed modular and clean backend architecture
- Improved performance and maintainability using TypeScript
- Delivered complete projects from idea to production
- Developed full-stack applications using React.js and Next.js
- Structured and optimized databases using PostgreSQL, Prisma, and MongoDB
- Structured and optimized databases using PostgreSQL, Prisma, and MongoDB
- Designed and developed RESTful APIs using NestJS and Node.js

SKILLS

Programming Languages: JavaScript, TypeScript

Backend Development: Building scalable APIs using NestJS and Node.js

Database Management: PostgreSQL, MongoDB, Prisma ORM

ORMs: Prisma, Sequelize

Frontend Development: React.js, Next.js, HTML5, CSS3, Tailwind CSS

State Management: Redux Toolkit (RTK), RTK Query, Zustand, Context API

Forms & Validation: React Hook Form, Zod, Yup, Joi

UI & Animation: Framer Motion

UI Libraries & Styling: Tailwind CSS, shadcn/ui, Material UI, PrimeReact, Flowbite

DevOps & Tools: Docker, Git, GitHub, Postman

PROJECTS

SaaS Workspace Backend System • [GitHub](#)

January 2023 - March 2023

Developed a scalable backend system for managing a multi-role workspace platform. Designed RESTful APIs for handling user roles, workflows, and data management. Implemented modular architecture using Node.js and Express, focusing on performance and maintainability.

E-Commerce Dashboard • [GitHub](#)

May 2024 - June 2026

Built a dynamic dashboard for managing products, orders, and users. Developed using React.js with responsive UI and integrated backend APIs for real-time data handling. Focused on performance and user experience.

Deliveria – Delivery Management Backend • [GitHub](#)

October 2025 - December 2025

Developed a backend system for delivery and logistics management. Designed APIs for order tracking, delivery workflows, and role-based access control. Structured database for scalable operations.

AdWall Backend System • [GitHub](#)

September 2025 - November 2026

Built backend services for an advertisement management platform. Developed APIs for campaign tracking and management, and designed scalable architecture for handling multiple users and business logic.

EgyptaPro Backend (NestJS) • [GitHub](#)

November 2025 - January 2026

Developed a scalable backend using NestJS and TypeScript. Designed modular architecture, implemented business logic, and structured APIs for maintainability and scalability.
